project deliverables - sprint-4

Team Id :PNT2022TMID50300

Proposed system:

Now a days parents are worried about their children for lot of reasons like a accident happened around the school campus.this is the most dangourus thing.

To avoid this we are going to implement a gadget.the gadget consists a sensor. The sensor going to control the speed limit of the vehicle around the school campus.if any High speed vehicle enter into the particular distance around the school campus that we are set.then the sensor immediately decrease the speed gradually.and once it cross the defined area then the speed increase gradually .

Is it very safety gadget for students and school management.
